## PROFESSIONAL SUMMARY

- Engineer with 5 years of experience turning ambiguous requirements into shipped software systems.
- Built two SaaS products: ShareMyVault (100+ users) and AgentLens (exited); founding engineering experience at two companies.
- Built and deployed an end-to-end enterprise agentic system in heavily compliant healthcare and finance environments.

## SKILLS

**Programming Languages:** Python, TypeScript, Java, C#

**AI Engineering:** LangGraph, Retrieval-Augmented Generation (RAG), agentic workflows, Pydantic validation, AI observability, evals, AI-assisted development with Claude, Codex, and Cursor

**Cloud, Data, and Backend:** AWS, Azure, Supabase, PostgreSQL, PostgreSQL RLS, FastAPI, .NET Core, microservices, Node.js, Stripe, message queues, pgvector, cron jobs

**Frontend and Product:** Flutter, Next.js, Vue.js, React.js

## WORK EXPERIENCE

### AI Engineer - AI Squared | Melbourne, Australia | Remote | May 2024 - Present

- **Translated ambiguous stakeholder requirements** into production AI workflows in a Forward Deployed capacity; joined as Engineer #2.
- **Architected a LangGraph asset-onboarding workflow**, reducing a 12-step manual process to one automated workflow across three systems and cutting onboarding time by 75% per asset.
- **Built a RAG evaluation suite** with citation, grounding, and context-recall checks; used citation-correctness evals to reduce unsupported responses by 60% and improve grounded-answer pass rate from 72% to 91%.
- **Optimized a Vue.js application** by preloading and caching read data client-side, reducing backend and database requests by 70% while limiting API calls to create, update, and delete operations.
- **Built production agentic workflows** achieving 90%+ successful task completion within a private network using open-source models under company security and data-governance policies.
- **Built Node.js backend applications** and integrated Stripe and external vendor payment APIs for full-stack product delivery.
- **Designed PostgreSQL databases with row-level security (RLS)** schemas and implemented message queues, pgvector, and cron jobs for controlled, multi-tenant data access, asynchronous processing, retrieval workflows, and scheduled operations.
- **Built a Flutter mobile application** from the ground up, delivering the mobile experience end to end.

### AI Engineer - Australian Red Cross Lifeblood | Melbourne, Australia | Hybrid | July 2025 - November 2025

- **Built and deployed a serverless GenAI knowledge-access application** across AWS and Azure ecosystems.
- **Evaluated RAG response quality using LLM-as-a-judge** across groundedness, relevance, and completeness, improving overall answer accuracy from approximately 78% to approximately 92% through retrieval and prompt optimization.
- **Designed data flows around healthcare privacy requirements**, ensuring PII/PHI-sensitive information remained within approved infrastructure and followed internal compliance controls.
- **Completed as a Work Integrated Learning engagement** through RMIT's Master of Information Technology.

### Software Developer - Arcon Techsolutions | Mumbai, India | July 2023 - February 2024

- **Developed and maintained backend APIs** using .NET Core and MySQL for a CIAM system.
- **Architected and optimized RESTful microservices** supporting authentication, analytics workflows, and backend data access.
- **Enhanced API performance by 30%** and implemented role-based authentication modules.
- **Built a robust frontend** using Angular.js.

### Full Stack Software Engineer - Skyline Energy & Infraa | April 2020 - June 2023

- **Built and maintained an internal inventory-management web application** using a Python FastAPI backend, MySQL database, and Next.js frontend for approximately 50 internal staff.
- **Developed backend APIs for inventory records, stock updates, and order workflows** supporting roughly 1,500 SKU items and 100 daily orders.
- **Replaced the manual ordering process** with a streamlined digital workflow, improving order tracking, inventory visibility, and operational efficiency across remote teams.
- **Created staff-facing Next.js interfaces for inventory lookup, record management, and order processing.**
- **Trained all 50 internal staff members** on the inventory-management platform, supporting 100% adoption across day-to-day business operations.

## PROJECTS

### Founder - ShareMyVault | [sharemyvault.com](https://sharemyvault.com)

- Founded and built an AI-powered digital estate-planning platform for wills, legacy planning, and guided support, designed for expats, seniors, and non-technical users.
- Grew the platform to 100+ live users and secured an API grant from Sarvam AI to support multilingual voice capabilities.
- Built a cross-platform Flutter mobile application with multilingual speech-to-text and text-to-speech support.
- Designed both web and mobile applications around a zero-knowledge encryption architecture to protect sensitive user data.
- Developed AI-driven conversational workflows that translate complex estate-planning decisions into clear, step-by-step guidance for non-technical users.

### Founder - AgentLens | [agentlens.in](https://agentlens.in)

- Identified this problem before AI SEO was a recognized category.
- Designed and deployed an AI platform that evaluates websites for AI-search readiness across accessibility, structured data, crawlability, and LLM interpretability.
- Built autonomous site-crawling pipelines with robots.txt parsing, multi-page exploration, metadata extraction, and WCAG accessibility audits.
- Developed AI simulation agents that emulate how ChatGPT, Gemini, and Perplexity interpret and retrieve website content.

## EDUCATION

### RMIT University, Australia

Master of Information Technology (AI)

### Mumbai University, India

Bachelor of Engineering, Computer Engineering

## ADDITIONAL EXPERIENCE

### Wildlife Rescuer - RAWW

- Assisted in the rescue, rehabilitation, and care of diverse species across field rescue and recovery operations.
- Led awareness drives on urban wildlife protection, public education, and prevention.
- Trained volunteers in safe animal handling and emergency response operations.

### Trek Leader - Mountain Marks

- Organized and led high-altitude treks across the Western Ghats.
- Managed logistics, safety, and route planning for large groups.
- Demonstrated leadership, endurance, and team collaboration in high-responsibility outdoor environments.
